USER INTERFACE DESIGN

EX No: 5 **240701463**

Conduct Task Analysis for an Online Shopping App and Document User Flows using Lucidchart

---

AIM

To analyze and document the sequence of tasks performed by users in an online shopping application and represent the workflow using user flow diagrams and wireframes created in Lucidchart.

OBJECTIVE

- To understand the interaction between the user and the application during online shopping.
- To identify the steps involved in browsing products, adding items to cart, and completing the checkout process.
- To represent the task flow visually using Lucidchart diagrams.
- To improve usability understanding through structured user flow documentation.

TASK ANALYSIS

The main tasks involved in an online shopping application include:

1. Browsing products
2. Searching for a specific product
3. Adding products to the cart
4. Completing the checkout process

These tasks represent the primary user journey from entering the application to successfully placing an order.

USER FLOW ANALYSIS

1. Login / Register Flow

1. User opens the application.

2. System checks whether the user has an existing account.
3. If the user already has an account, they select **Login**.
4. If not, the user selects **Register** and creates an account.
5. After successful authentication, the user is redirected to the home screen.

---

2. Browsing Products

1. User lands on the home screen.
2. User selects a category such as **Men** or **Women**.
3. The system displays available shoes in the selected category.
4. User browses through the product list.
5. User selects a product to view detailed information.

Flow Representation:
Home Screen → Select Category → Browse Shoes → View Product Details

---

3. Selecting Product Options

1. User views product details including size, price, and description.
2. User selects the required **size** of the product.
3. If the size is not selected, the user returns to browsing products.
4. If the size is selected successfully, the user proceeds to the next step.

---

4. Adding Product to Cart

1. After selecting the product size, the user decides whether to add the item to the cart.
2. If the user chooses **Yes**, the item is added to the cart.
3. If the user chooses **No**, the item is added to the **Wishlist**.

Flow Representation:
Product Details → Select Size → Add to Cart / Wishlist

---

5. Checkout Process

1. User reviews the items in the cart.

2. User proceeds to the payment stage.
3. User selects the preferred payment method.

Available Payment Methods:

- UPI Payment
- Cash on Delivery (COD)

If the payment process fails or is cancelled, the product may be moved to the wishlist.

---

6. Order Completion

1. After successful payment, the user enters **shipping details**.
2. The system confirms the order placement.
3. The order confirmation screen is displayed to the user.

Flow Representation:
Cart → Payment → Shipping Details → Order Confirmation → End

PROCEDURE

Step 1: Create a New Diagram

1. Open Lucidchart.
2. Sign in or create a new account.
3. Click **Create New Document**.

Step 2: Choose Diagram Type

1. Select **Blank Flowchart Template**.

Step 3: Add Flowchart Shapes

Use different shapes to represent system actions:

- Oval → Start / End
- Rectangle → Process / Action
- Diamond → Decision
- Arrow → Flow direction

Step 4: Build the User Flow

Create the following steps in sequence:

Start
Login Decision
Register / Sign In
Select Category
Browse Shoes
View Product Details
Select Size
Add to Cart or Wishlist
Payment
UPI / COD
Shipping Details
Order Confirmation
End

Step 5: Connect Shapes

Use arrows to connect each step and represent the flow of the process.

Step 6: Customize Diagram

- Use colors for different steps.
- Group similar actions together.
- Ensure the diagram clearly shows the decision paths.

Step 7: Save and Export

Save the diagram and export it as an image or PDF for documentation.

USER FLOW DIAGRAM

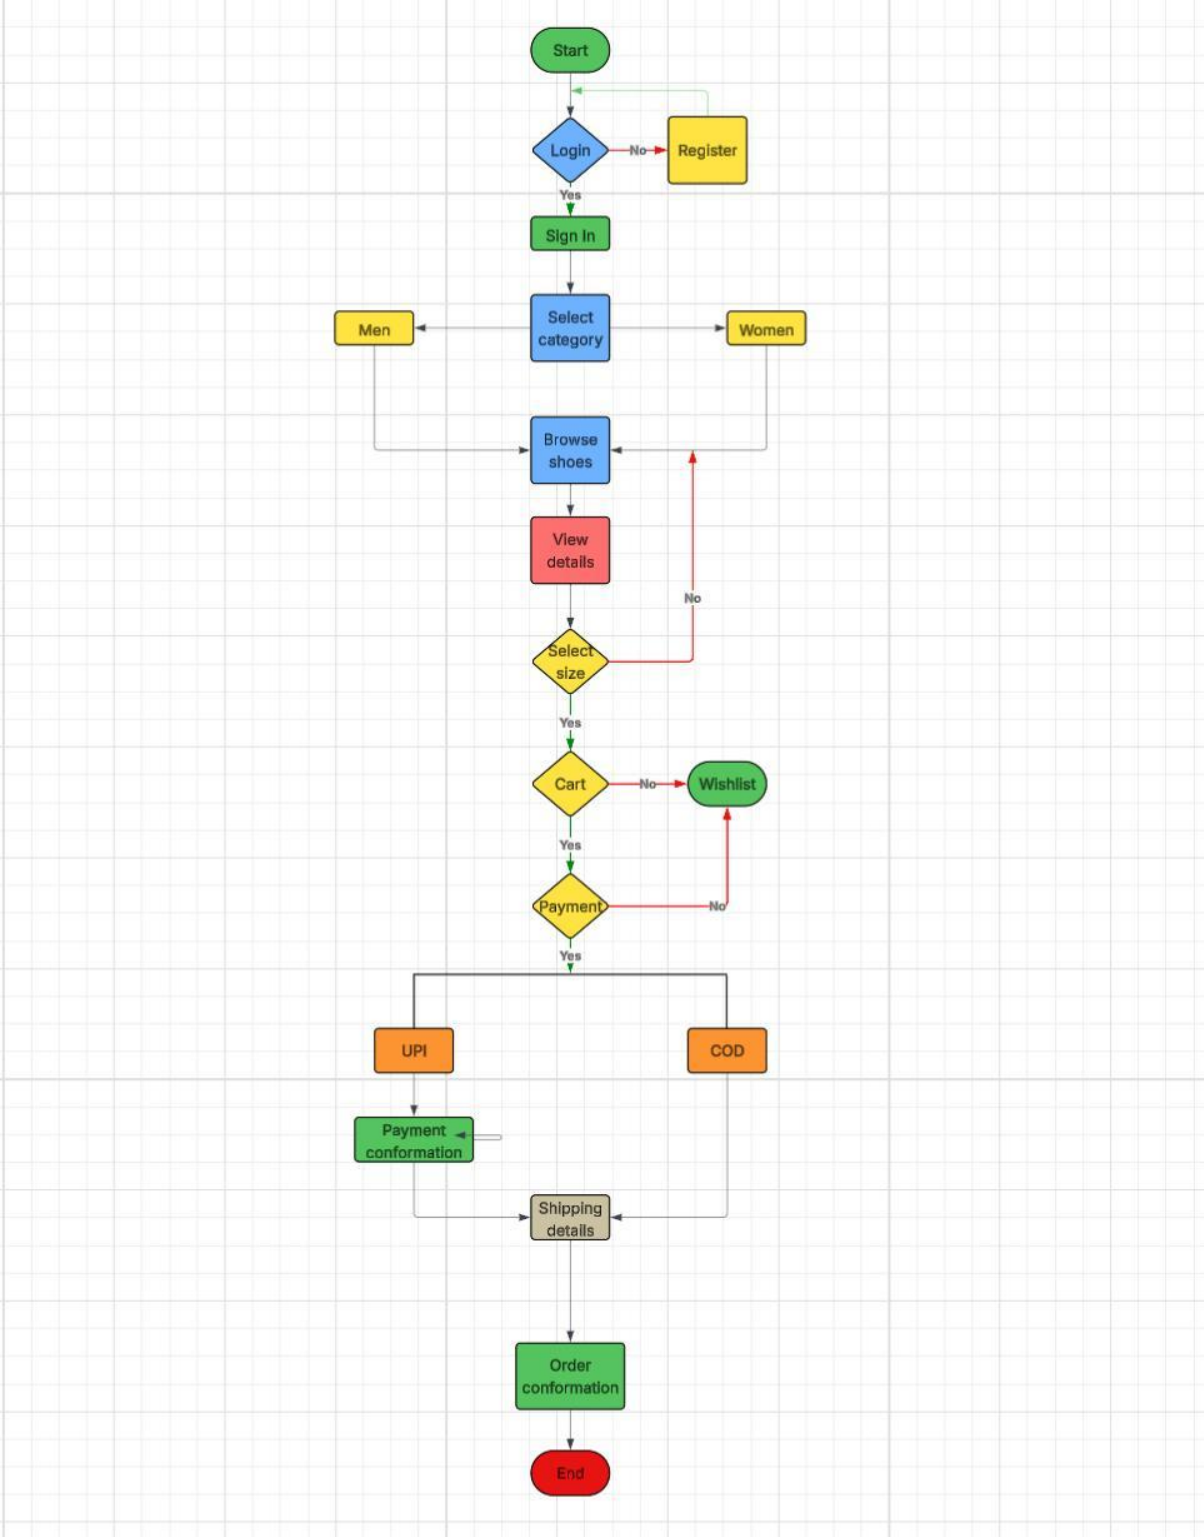

Figure 1: User Flow Diagram for Online Shopping Application

RESULT

The task analysis for an online shopping application was successfully conducted. The user flow from login to order confirmation was documented and visually represented using Lucidchart. This exercise helped in understanding the sequence of user interactions and improving the design of the application workflow.
